Bush Global Warming Petition

Whereas global warming *will* have vast consequences including global food insufficiency and perhaps a "new Ice Age";

whereas Democratic approaches to global warming as a problem have proven insufficient, and will not stop global warming;

whereas the Bush Administration's approach to global warming is forward-thinking and certain to be effective, in that:

- the United States is uniquely positioned to *benefit* from a "new Ice Age," while our competitors will be *weakened* by it;
- the "new Ice Age" will be temporary anyhow, thanks to the Bush Administration proposal to *increase* global warming with massive infusions of hydrofluorocarbons into the atmosphere;

therefore we, the undersigned, support the Bush Administration's *positive* approach to the global warming problem and reject the Democrats' *negative* one.

We also pledge to learn about the Bush Administration's global warming plans and policies (at www.CheneyBush.com/warming/) and be ready to discuss them with our neighbors, colleagues, family, and Congressmen.
